The mission of the Washington County Coroner's Office is to serve the County of Washington by providing a thorough, respectful and unbiased investigation into the cause and manner of death for all individuals who come under our jurisdiction, and to serve with honesty and integrity.

The preceding report is a constantly-changing document and does not contain information about cases which are pending the results of toxicology reports, histology reports and the pathologist's final review. As such, statistics for months prior are subject to change in the future as cases are finalized and unpended.

Natural deaths or presumed natural deaths describe a case where advanced age or natural disease processes are documented or determined to be the cause of death at autopsy.

Most drug deaths within Washington County are ruled generally ruled "Accidental." As such, there may be some overlap between the drug deaths category and the accidental deaths category. When referencing these statistics, note that on page one, the total accidental deaths listed will include drug deaths. In the subsequent pages, drug deaths and accidental deaths are treated separately.

Similarly, highway fatalities are calculated with accidental deaths on page one, but are listed separate from "Violent or Accidental Deaths" in the following pages.

For the purposes of this report, "Accidental" refers only to the manner of death, and does not address causality or culpability regarding a death.
